 The best metal finish I have seen yet. "pics" (Post #1)

AK47.net Member "tschiemer" aka Robert works for John Norrell Arms. They use their patented Moly Resin coating. Robert re-finished my parked SSP99P with their semi-gloss black moly resin.

The turn around time was only a week and Robert kept me right up to date with the progress.

This finish is the strongest and best applied I have ever seen. It beats the finish applied on my Kreb's, Inrange and Investment Grade produced AK's. I am not knocking these smiths; I am just pointing how good the moly resin finish is. You can tell that it has "ceramic like" hardness and has very low friction properties.
